

Energy policy

28 May 2018

- Our strategic goal is continuous reduction of energy consumption and energy efficiency at all our production sites at the level of the best global leading companies.
- We regularly monitor energy consumption, analyse the data and plan to further improve energy efficiency, we also update our goals and targets.
- When designing new projects, updating applied technologies or selecting new equipment for our operations, we set energy efficiency requirements, which are a part of contractual agreements.
- As a part of energy management system, all information on corporate goals and targets and resources needed to achieve them is available for all our employees. Each employee can propose measures to improve energy efficiency. We create a corporate culture of energy efficiency.
- When implementing energy management system, we comply with all legislative and other voluntary requirements.
